

Water, one of the basic necessity of life...

We, at Eco Industries bring you safe and clean drinking water... AZURA Packaged drinking water.

Eco Industries is a manufacturer and marketer of UV treated and Ozonized, packaged drinking water with advanced water purifying equipment from our self-sustained plant located at Shirol, Dist. Kolhapur. We provide safe, hygienic, healthy and non-carbonated drinking water.

Most of the water borne diseases emanate from unclean water. Packaged drinking water ensures safe, clean, potable water for human consumption

SAND FILTRATION

The water is collected in a pressurised tank for filtration with a sand filter to remove suspended impurities, a filter to remove odour, a multi micron filter to remove dissolved impurities up to 5 microns and finally a micro filter to remove 98% of dissolved solids and bacteria. Softening minerals imparting hardness to water are removed.

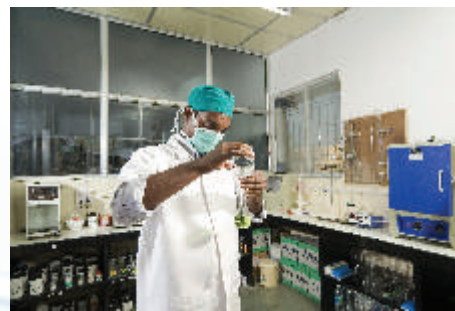

CARBON FILTRATION

Granular activated carbon filtration removes colour, odour and chlorine.

REVERSE OSMOSIS

Reverse Osmosis involves passing water through a semi-permeable membrane with pores as small as 0.0001 microns. That means water is passed through pores that are smaller than a strand of human hair. In this process all impurities, toxic elements, minerals, and micro organisms including viruses are removed.

OZONATION

Ozonation to maintain sterility of water during and after process.

MICRON FILTRATION

We utilize a filtration method that the bottled water industry recognizes as micron filtration. The filter removes 100% of all particles of a given size. Filters are usually rated in microns, according to the size of particles that a filter will remove. A micron is one thousandth of a millimeter. A one micron filter will remove 100% of all particles that are one micron (or larger) in size.

ULTRAVIOLET STERILIZATION

It is to minimise microbial contamination by killing micro organisms.

CHEMICAL LAB & MICROBIOLOGY LAB:

State of the art instruments, modern facilities and highly qualified technicians see to it that AZURA provides sweet, hygienic and germ free water.
